

## Who are we?

We are a team of highly qualified ecologists offering our clients an extensive range of ecological surveys and habitat assessments across the UK and Eire. We offer a sensible and pragmatic approach, helping our clients to meet planning requirements, to achieve environmental objectives and to ensure compliance with environmental legislation. Our surveys are commissioned as part of design, development and construction projects, routine site management operations and habitat improvement schemes.

Our primary purpose is to contribute to the efficient and cost-effective delivery of development and improvement projects, and instructing appropriate biodiversity surveys at the initial stages of a project can save a significant amount of time and money. We pride ourselves on the quality of our reports and we have an excellent record of successful planning applications related to our work.

OHES offers a nationwide service to our clients who include architects, developers, construction companies, Natural England, local authorities, airports, and other conservation bodies and government departments.

## Our services include:
